

19 years of design experience, the last 9 working remotely for US companies. I work across direction and execution, collaborating directly with stakeholders, product managers, and cross-functional engineering teams.

EXPERIENCE

Handy Golf — Head of Design Aug 2024 – Present · Provo, UT · remote

- Responsible for the design direction across the Handy Golf platform: golfer app, coach app, content library, coach websites, and company site.
- Turned coach website creation into a content configuration flow within the Coach app.
- Designed a shared interface for iOS and Android, allowing the Android team to build from the same screens without a separate design.
- Built a shared design system across products, platforms, and different brand contexts.
- Golfer app launched with 5,000+ downloads, including lessons, drills, games, and the first marketplace.

Grupo NGN — UX/UI Product Designer May 2020 – Aug 2024 · Coral Springs, FL · remote

- Designed the platform and its core data workflows, enabling customers to configure visualizations, formulas, benchmarks, and data connections themselves. Reduced client implementation time from over a month to just over a week, eliminating the need for specialized training to build dashboards.
- Redesigned the UX across NGNCloudComm, the company's cloud communications platform, improving usability while preserving familiar workflows in an established product.
- Won Best in Show at PACE ACX 2020. When the event platform only supported images and text, built an interactive solution with HTML, CSS, and JavaScript, writing the front-end myself.

VisualCue — Art Director / Product Design Nov 2013 – May 2020 · Provo, UT · remote from 2017

- Led the design of CueFit, the company's product for the call center market. The product was later acquired by Grupo NGN, which absorbed the team.
- Transformed the tile — the product's core visual unit — from individually illustrated artwork into a reusable, configurable system, creating a common structure across clients.

HOW I WORK

I work closely with product and engineering, especially in environments where design has to evolve alongside changing product decisions.

- Design systems built and maintained in Figma: variables, modes, and shared libraries
- Multiplatform product work across iOS, Android, and web
- AI for repetitive design-system work and early exploration
- Documentation and handoff written as part of the work

EDUCATION & LANGUAGES

Escola Panamericana de Arte
Bachelor's Degree in Advertising, 2010–2012

English — Fluent, professional working proficiency
Portuguese — Native
