SUMMARY

19 years of design experience, the last 9 working remotely for US companies. I work across direction and execution, collaborating directly with stakeholders, product managers, and cross-functional engineering teams.

EXPERIENCE

Handy Golf — Head of Design

Aug 2024 – Present · Remote · Provo, UT

- Sole designer across the platform: golfer app, coach app, content library, coach-generated websites, and company site. Responsible for design direction end to end.
- Built a shared design system across products, platforms, and different brand contexts.
- Turned coach website creation into a content configuration flow: coaches define what they offer and how their information is organized, while the system handles the presentation.
- Designed a shared interface for iOS and Android, allowing the Android team to build from the same screens without a separate design.
- Golfer app launched with 5,000+ downloads, including lessons, drills, games, and the first marketplace.

Grupo NGN — UX/UI Product Designer

May 2020 – Aug 2024 · Remote · Coral Springs, FL

- Brought processes that previously depended on specialists into the product, allowing customers to configure visualizations, formulas, benchmarks, and data connections themselves. Designed the platform and its core data workflows.
- Reduced client implementation time from more than a month to just over a week, while eliminating the need for specialized training to build dashboards.
- Redesigned the core of NGNCloudComm, the company's cloud communications platform.
- Won Best in Show at PACE ACX 2020. When the event platform only supported static images, built an interactive solution with HTML, CSS, and JavaScript, writing the front-end myself.

VisualCue — Art Director / Product Design

Nov 2013 – May 2020 · São Paulo, then remote from 2017 · Provo, UT

- Led the design of CueFit, the company's product for the call center market. The product was later acquired by Grupo NGN, which absorbed the team.
 - Transformed the tile — the product's core visual unit — from individually illustrated artwork into a reusable, configurable system, creating a common structure across clients.
-

HOW I WORK

I work closely with product and engineering, especially in environments where design has to evolve alongside changing product decisions.

- Design systems built and maintained in Figma: variables, modes, and shared libraries
 - Multiplatform product work across iOS, Android, and web
 - HTML, CSS, and JavaScript when prototyping or implementation helps resolve a design decision
 - AI for repetitive design-system work and early exploration
 - Documentation and handoff written as part of the work
-

EDUCATION & LANGUAGES

Escola Panamericana de Arte

Bachelor's Degree in Advertising, 2010–2012

Portuguese — Native

English — Fluent, professional working proficiency
